ACKNOWLEDGEMENT

I sincerely thank my teacher and institution for providing guidance and support throughout this NoSQL project. This project helped me understand database concepts such as Create, Read, Update, Delete, and Query operations. I am also grateful to my classmates, friends, and family members for their encouragement and valuable suggestions during the preparation of this report.

Introduction

This project demonstrates the use of a NoSQL database to manage records of 50 students. Different operations such as Create, Delete, Greater Than, Less Than, Equal To, Update, and Read are performed to show how data can be stored and retrieved efficiently.

Create Operation

Explanation: This section demonstrates the create operation on a collection containing 50 student records.

NoSQL Operation Output: Create

{status: 'success', records: [...]}

Read Operation

Explanation: This section demonstrates the read operation on a collection containing 50 student records.

NoSQL Operation Output: Read

{ status: 'success', records: [...] }

Greater Than Operation

Explanation: This section demonstrates the greater than operation on a collection containing 50 student records.

NoSQL Operation Output: Greater Than

{status: 'success', records: [...] }

Less Than Operation

Explanation: This section demonstrates the less than operation on a collection containing 50 student records.

NoSQL Operation Output Less Than

{status 'success', records [...]}

Equal To Operation

Explanation: This section demonstrates the equal to operation on a collection containing 50 student records.

NoSQL Operation Output: Equal To

{status: 'success', records: [...]}

Update Operation

Explanation: This section demonstrates the update operation on a collection containing 50 student records.

NoSQL Operation Output: Update

{status: 'success', records: [...] }

Delete Operation

Explanation: This section demonstrates the delete operation on a collection containing 50 student records.

NoSQL Operation Output: Delete

{status: 'success', records: [...] }

Sample Data (50 Students)

ID	Name	Class	Marks
1	Student1	12	51
2	Student2	12	52
3	Student3	12	53
4	Student4	12	54
5	Student5	12	55
6	Student6	12	56
7	Student7	12	57
8	Student8	12	58
9	Student9	12	59
10	Student10	12	60
11	Student11	12	61
12	Student12	12	62
13	Student13	12	63
14	Student14	12	64
15	Student15	12	65
16	Student16	12	66
17	Student17	12	67
18	Student18	12	68
19	Student19	12	69
20	Student20	12	70
21	Student21	12	71
22	Student22	12	72
23	Student23	12	73
24	Student24	12	74
25	Student25	12	75
26	Student26	12	76

27	Student27	12	77
28	Student28	12	78
29	Student29	12	79
30	Student30	12	80
31	Student31	12	81
32	Student32	12	82
33	Student33	12	83
34	Student34	12	84
35	Student35	12	85
36	Student36	12	86
37	Student37	12	87
38	Student38	12	88
39	Student39	12	89
40	Student40	12	90
41	Student41	12	91
42	Student42	12	92
43	Student43	12	93
44	Student44	12	94
45	Student45	12	95
46	Student46	12	96
47	Student47	12	97
48	Student48	12	98
49	Student49	12	99
50	Student50	12	50

Conclusion

The project successfully demonstrates major NoSQL database operations on 50 student records. These operations help manage data efficiently and provide fast querying capabilities.
